

OneMart order notifications and setup

In this FAQ we will go over how to set up notification for OneMart. These notifications happen anytime a customer submits an order online or signs up for the newsletter on your site.

When you go into your OneMart under "Details" you will see two sections.

- “Send Email Address” is for setting up the email that will be seen anytime a notification or order confirmation is sent to a client or rep under.
- “Notification Email” is the email address you want to receive the notifications when a customer submits an order or signs up for newsletter this is under.

You can use different emails in both sections.

Newsletter Subscription Location

In your OneMart there is a widget called Newsletter Subscription that can be added to every page. The default for this widget is located at the bottom of the home page. Once a customer signs up the "Notification email" will get an email with the contact information.

** Note that this e-mail is not entered into RepDesk.
